# MADE FOR YOUR OPENING

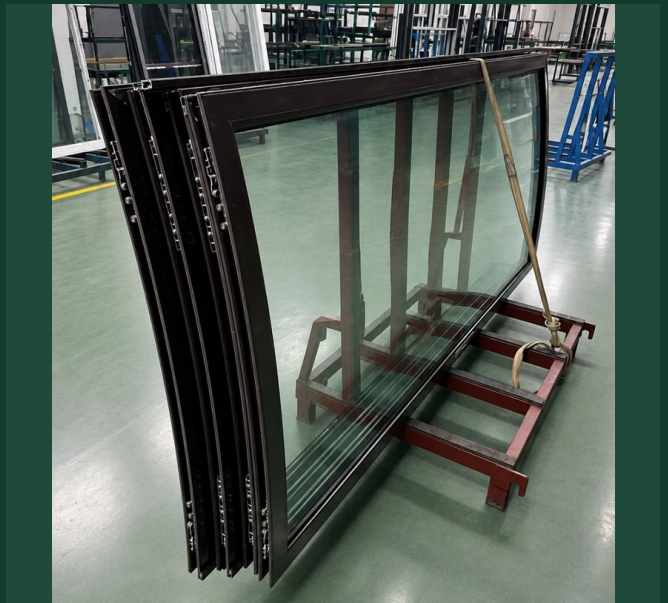

## BESPOKE CURVED SLIDING DOOR SYSTEMS

Every curved screen is made individually to the geometry of the opening. Aluminium profiles are bent to the exact radius, with curved glass to match. Door leaves are glazed and trial-assembled before leaving the factory.

The system is designed for sliding doors; curved hinged and French doors are not offered.

Aluminium profiles bent to the specified radius

Curved leaves, glazed and trial-assembled

## CONFIGURED FOR YOUR PROJECT

- Curved sliding doors, with fixed curved panels where required
- Curved toughened glass or curved double glazed units
- Straight sliding doors in the same system for square openings
- Powder coated finishes, inside and out; made to measured sizes

### To prepare your quotation

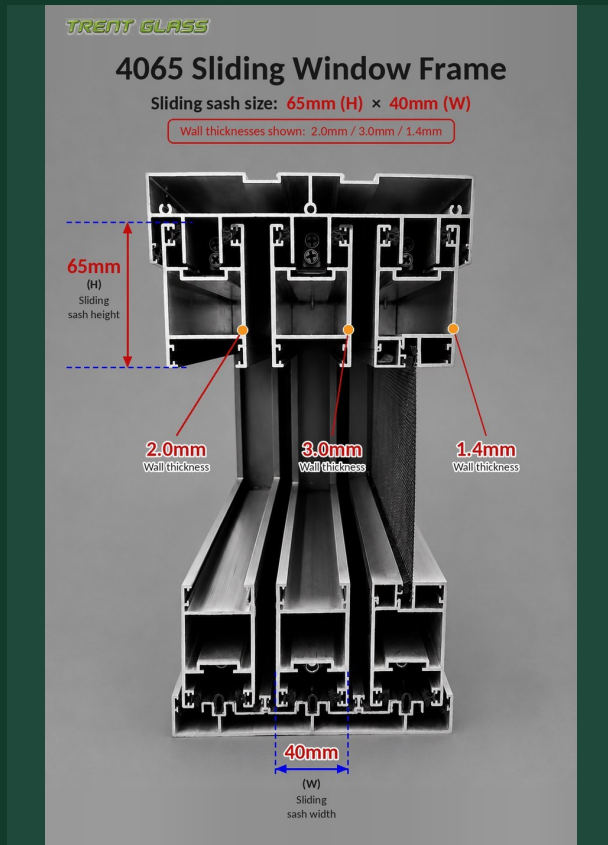

Please supply the width and height of each opening and the depth of the curve for curved bays. Each installation is individually priced.

Production photographs show comparable units at our overseas manufacturing facility. Finishes and configurations are illustrative and specified for each order.

# THE SLIDING SYSTEM

## 4065 SERIES ALUMINIUM - TWIN TRACK

Each sliding leaf runs on its own track, allowing the leaves to pass the fixed panels around the curve. Profiles and guides are matched to the required radius.

4065 section: 65 x 40 mm sliding sash

### AT A GLANCE

- Twin track, with a separate runner for each sliding leaf
- 65 x 40 mm sliding sash section
- Quoted on the 3.0 mm wall specification
- Stainless steel roller carriages with height adjustment
- Curved head track and floor guide matched to the radius
- Full perimeter brush and gasket weather seals
